Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patents@lilly.com

Office Action Summary

Application No.

10/578,991

Applicant(s)

GAJEWSKI ET AL.

Examiner

NIZAL S. CHANDRAKUMAR

Art Unit

1625

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 January 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-16 is/are pending in the application.
- 4a) Of the above claim(s) 7-16 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☒ Claim(s) 1-6 are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SE-US)
Paper No(s)/Mail Date 05/11/2008
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I claims 1-6, in the reply filed on 01/28/2008 is acknowledged.

The traversal is on the ground(s) that "the reliance on US 4282246, for the teaching the common technical feature of the claims is misplaced". This is not found persuasive because the common technical feature is the core structure of 2-benzyl-furan, the invariant common to all the groups, is found in the cited prior art. The substituents such as carboxylic acid group does not change the core structure ('bare' benzylfuran).

The requirement is still deemed proper and is therefore made FINAL.

Claims 7-16 withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 01/28/2008.

This application contains claims drawn to an invention nonelected with traverse in the reply filed on 01/28/2008. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation corresponding to N-halo substituted amides such as

There is insufficient antecedent basis for this limitation in the claim, because R4 and R5 are not drawn to halogens in the base claim 1.

Likewise, claim 4 is drawn to prodrug esters and as such lacks antecedent basis, because the base claim 1 is not drawn to such compounds.

Claim 4 is drawn to ester prodrugs without defining the chemical structures of the prodrug compounds being claimed. What are the structures of these "prodrugs"? Applicants' "prodrugs" are molecules whose structure lie outside the subject matter of formula I, but upon metabolism in the body are converted to active compounds falling within the structural scope of formula I. The claim describes the function intended but provides no specific structural guidance to what constitutes a "prodrugs". Structural formulas, names, or both can accurately describe organic compounds, which are the subject matter of claims. Attempting to define means by functions is not proper when the means can be clearly expressed in terms that are more precise.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 2, 4, 5 and dependent claims are rejected under 35 U.S.C. 112, first paragraph, because the

Art Unit: 1625

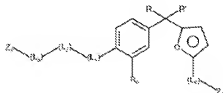

specification, while being enabling for a limited number of compounds of the formula, does not reasonably provide enablement for the plurality of possible structures claimed. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims. The specification is enabling for a limited number of possibilities for the substituents of the elected groups of compounds. The specification, for example, while enabling for making compounds wherein $R_4 = H$, is not enabling for making other possibilities claimed for $R_4 = \text{fluoroalkyl}$. It is not seen, *for example*, where in the specification, enabling disclosure for making or using (biological activity) such possibilities is present. Further, it is not seen where the specification discloses prodrugs.

The determination that "undue experimentation" would have been needed to make and use the claimed invention is not a single, simple factual determination. Rather, it is a conclusion reached by weighing all the relevant factual considerations.

Enablement is considered in view of the Wands factors (MPEP 2164.01 (a)). These include: (1) breadth of the claims; (2) nature of the invention; (3) state of the prior art; (4) amount of direction provided by the inventor; (5) the level of predictability in the art; (6) the existence of working examples; (7) quantity of experimentation needed to make or use the invention based on the content of the disclosure; and (8) relative skill in the art.

All of the factors have been considered with regard to the claim, with the most relevant factors discussed below:

The breadth of the claims: The elected group I is drawn to compounds of the following formula

Art Unit: 1625

wherein LF is a bond, ZF is -CONR4R5, L1 is O,

L2 is -C(R40)2-

and R and R1 are independently alkyl, fluoroalkyl, or form carbocycles with the carbon attached to them;
RP is defined to be both electron donating and electron withdrawing groups.

The level of the skill in the art: The level of skill in the art is high. However, due to the unpredictability in the art of organic and medicinal chemistry, it is noted that each embodiment of the invention is required to be individually assessed for viability.

The amount of direction provided by the inventor and the presence or absence of working examples:

With regards to variables R, R', the direction and working example provided in the specification is limited to making compounds wherein R = R' are (the same) ethyl groups. The disclosed method of making this substituent would be applicable to making compounds wherein R and R' are alkyl groups or form a carbocycle, assuming enolization would not complicate the addition of lithiated furan to cycloalkanones.

With regards to RP substituent, the disclosure is limited to alkyl groups that would not participate in Grignard reactions or the Lewis acid catalyzed (carbenium ion forming) reactions. These carbon-carbon bond forming reactions, would not be compatible with groups such as acetyl, alkenyl etc. In addition, while an electron donating RP substituent could facilitate reaction with carbenium ion, the same can not be said for a RP electron withdrawing substituent.

With regard to L2 of the elected group, enabling disclosure is found for R40 = H. The specification does not provide citations (commercial or literature) for procuring the starting materials usable that could substitute for the lack of working examples with respect to non-enabled substitutions for this variable.

With regard to ZF of the elected group, it is not seen where in the specification enablement is present for such uncommon amino substituents such as C2 alkenyl of alkynyl, or halogenated aminoalkyl. Thus, enablement is lacking for making (or using) compounds wherein ZF is selected from:

The specification does not provide citations (commercial or literature) for procuring the starting materials and methods of making that could substitute for the lack of working examples with respect to such N-haloamino derivatives.

With regards to claim 4, the specification lacks guidance for making prodrugs. (see rejection under 35 U.S.C. 112, second paragraph). The claim(s) contains subject matter that was not described in the specification in such a way as to enable one skilled in the art of medicinal chemistry to use the invention. Finding a prodrug is an empirical exercise. Predicting if a certain ester of a claimed alcohol, for example, is in fact a prodrug, that produces the active compound metabolically, in man, at a therapeutic concentration and at a useful rate is filled with experimental uncertainty. Although attempts have been made to predict drug metabolism *de novo*, this is still an experimental science. It is well known in the art that for a compound to be a prodrug, it must meet three tests. It must itself be biologically inactive. It must be metabolized to a second substance in a human at a rate and to an extent to produce that second substance at a physiologically meaningful concentration. Thirdly, that second substance must be biologically active. Determining whether a particular compound meets these three criteria in a clinical trial setting requires a large degree of experimentation. It is not seen where the specification disclosure relating to these tests.

With regards to claim 5, it is not seen where in the specification enablement is present making the claimed sodium and potassium salts of the elected groups of compounds. Since the elected group do not encompass compounds with substituents commonly recognized in pharmaceutical arts for making salts.

The state and the predictability of the art: With regards to making of the compounds, in spite of major advances in protecting group strategies in synthesis, the state of the art is unpredictable as to functional

group compatibility during many chemical transformations. The feasibility of any conceivable reaction scheme for the preparation of an instantly claimed variables such as RP would be unpredictable because what has been taught in the specification and in the prior art, at the time of the instant application, is for making benzene ring substituent that is inert to reaction conditions that are necessary to form the benzylfuran core structure.. All the claimed substituents in the instant case are not compatible with the chemistry taught in the specification such that undue experimentation would be required to arrive at viable synthetic strategies. The existence of such unpredictabilities and uncertainties would prevent one of ordinary skill in the art from accepting the process such as the one shown for minimally substituted benzene ring and unsubstituted R and R' alkyl groups, on its face as universally applicable for all the substitutions claimed.

The quantity of experimentation: For the reasons presented above, there is a substantial gap between what is taught in the specification and what is being claimed. Given that the specification discloses biological activity for limited number of narrowly defined compounds such as compounds with R=R'=ethyl, R40 = H, it is not clear what specific embodiments would be required for VDR modulation.

Limiting RP = H or alkyl; R40 = H, and deleting C2 alkenyl or alkynyl for R4 and R5 and limiting the haloalkyl relating to R4 and R5 to fluoroalkyl would overcome this rejection.

The applicant is advised to redraw the structures commensurate with the elected group.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to NIZAL S. CHANDRAKUMAR whose telephone number is (571)272-6202. The examiner can normally be reached on 8.30 AM - 4.30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janet Andres can be reached on 571 0272-0867. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
